Frequent interventions and clinical indications in periodontal and implant surgery

Socket Preservation

Soft Tissues Around Implants

Date : 27 Oct 2018 (Saturday)  
Time : 9:00a.m - 5:00p.m  
Venue: Forever Green Dental Products Limited  
Unit 1202, Lippo Sun Plaza, 28 Canton Road, Tsim Sha Tsui, Kln  
Language : English  
CME Points : NONE

## About the Speaker

Dr. Dávid Botond Hangyási graduated at the Faculty of Dentistry, University of Szeged in 2007 where he also completed his postgraduate training and obtained the degree of Specialist in Periodontology. Since then he is a part time lecturer at the Department of Periodontology, University of Szeged and also has private practice in Hódmezővásárhely. He was Head of Department in 2013-2014 and since 2015 he is an academic contributor at the Department of Periodontology, University of Szeged. Dr. Hangyási is a board member of the Hungarian Association of Periodontology and regular lecturer at worldwide events in the field of periodontology and implant dentistry. His fields of interest are non-surgical periodontal therapy, periodontal plastic surgery and hard- and soft tissue management in dental implantology.

## Synopsis

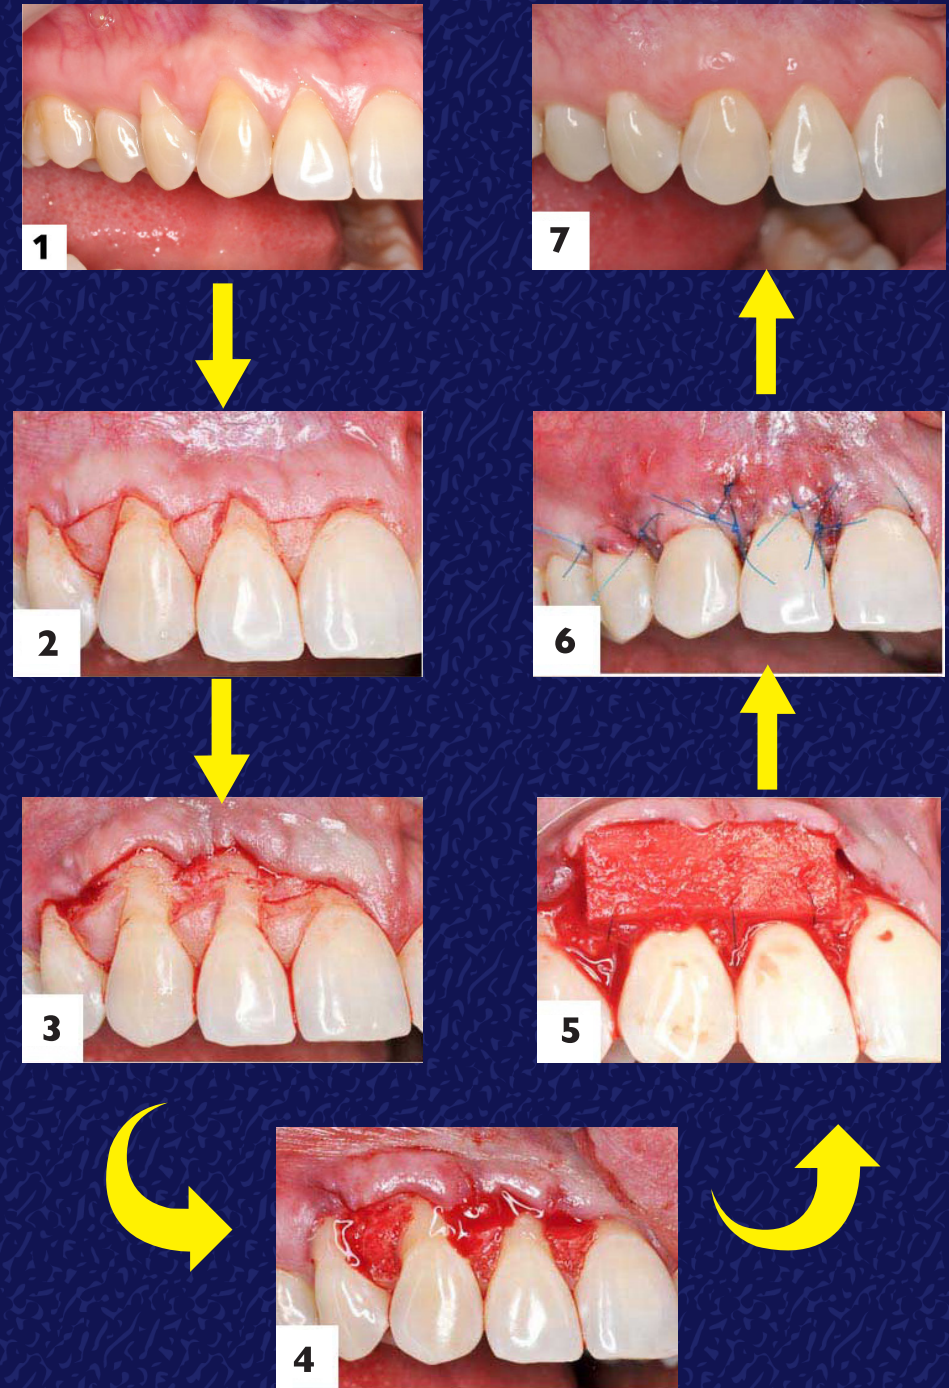

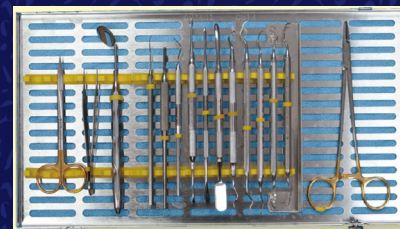

### A) Lecture: Frequent interventions and clinical indications in periodontal and implant surgery (3 hours)

The proper choice of surgical techniques and possibilities including the treatment of gingival recessions and intrabony defects around teeth plays crucial role in the patient's treatment. It is also very important to specify the indications and biomaterials in immediate, early and delayed implant placement after short- or long-term socket preservation. Therefore, various implant solutions with or without horizontal and/or vertical bone loss will be explained in details. In addition, different methods aim to increase the gingival volume around teeth and implants. The proper flap design and the correct soft tissue graft choice seems to be the key for predictable outcome.

### B) Hands-on course (3 hours)

- Individual planning, risk assessment, comprehensive treatment strategies and prognosis in patients
- The proper choice of xenogenic and synthetic biomaterials in various indications for hard and soft tissue management as well as their handling and application
- Guided bone regeneration in major bony defects
- Post-extraction socket-classification and treatment
- Multiple recession type defects treatment

*The registered participants must bring their own surgical instruments for the hands-on course. After your registration, we will send the list of instruments to you by e-mail.*

*Treatment of Gingival Recessions*
